

CLAIMS

1. A pressure-sensitive adhesive sheet comprising a base material and a pressure-sensitive adhesive layer, having formed therein a plurality of through holes passing through from one surface to the other surface thereof, and being liable to be subjected to a pressure of not less than 1 Pa, the pressure-sensitive adhesive sheet characterized in that:

said through holes have a diameter in said base material and said pressure-sensitive adhesive layer in a range of 0.1 to 300  $\mu\text{m}$ , and a hole density in a range of 30 to 50,000 per 100  $\text{cm}^2$ ;

and said pressure-sensitive adhesive layer has a storage modulus at 70 °C of not less than  $9 \times 10^3$  Pa, and a loss tangent at 70 °C of not more than 0.55.

2. The pressure-sensitive adhesive sheet according to claim 1, characterized in that said through holes are formed by laser processing.
